

## THE COMPANY

SynEdge is building the next generation of content delivery that accelerates and scales websites, mobile apps and online video/audio by optimising, securing and moving the content closer to the end-user.

The CDN market is exciting, hyper scale and extremely fast growing. In 2015 CDN's are making up 60% of all internet traffic globally and that percentage is still growing year-over-year.

We're creating a faster, more secure and more reliable internet.

## THE POSITION

SynEdge is looking for a Senior Developer to join our rapidly growing team. As a team we are building a web service for our customers to configure the CDN and to look into performance metrics of our system and at the same time we build the highly scalable processing of log entries from our edge nodes. Our goal is to process 1000+ lines per second and provide near real time statistics through the web service API. We need someone who has experience with large scale applications, processing big amounts of data from multiple platforms. Every developer works on all aspects of the platform, from design and architecture to the implementation.

This position is for the Eindhoven office, located in the center of Eindhoven right next to the train station.

## RESPONSIBILITIES

- Together with operations, design and implement SynEdge's data gathering and storage systems
- Code in Scala, Groovy or Java, building a microservices architecture
- Design, build and improve SynEdge's internal and customer dashboards
- Work on internal tooling for troubleshooting
- Constantly improving and monitoring the performance and health of the platform
- Mentoring and training of the development team as it grows
- Troubleshoot and resolve complex issues within specific service level agreements
- Create and define server requirements for new products, including technical documentation

## EXPERIENCE

- 5+ years of experience in JVM based applications
- 5+ years of operational experience designing and implementing large scale web platforms
- Experience in the usage of open source frameworks
- Experience with Spark or Hadoop is a pre
- Basic understanding of Linux / Unix based systems
- Good understanding or current methodologies in high performance operations and large-scale operations
- Experience with continues integration and continues delivery
- Comfortable with reading and/or writing Python and/or Perl scripts
- Experience with big-data platforms like Hadoop is a plus
- Valid driving license
- Valid EU working permit
- Fluent in spoken and written (business) English

### THE ATTITUDE

- Highly responsible, self-motivated, and able to work with minimal supervision
- Strong communicator
- No 9-to-5 mentality, thriving in a high growth entrepreneurial environment

### WHAT WE OFFER

- Competitive salary
- Choice in workstation (MacBook Pro or Dell Latitude) with multiple 25"+ high-resolution screens
- Work in a highly motivated, fast growing international team of industry experts
- Work on massive scale web infrastructure distributed across the globe
- Free lunch
- Flexible holiday options
